

Live Backend Stock System – User Guide

1. Homepage Overview

This is the main landing page where users can browse all available products. Available products are shown here pulled live from the database (expired = 1)

Screenshot:

2. Product Cards

Each product is displayed as a card containing:

- Product image
- Name
- Description
- Price
- “Buy Now” button

Screenshot:

			
Jordan 4 Size 7.5 Mens £250.00 Buy Now	Moncler Maya Mens Size S £200.00 Buy Now	Amiri Cap Trucker Hat £95.00 Buy Now	YSL Jumper Saint Laurent Jumper £100.00 Buy Now

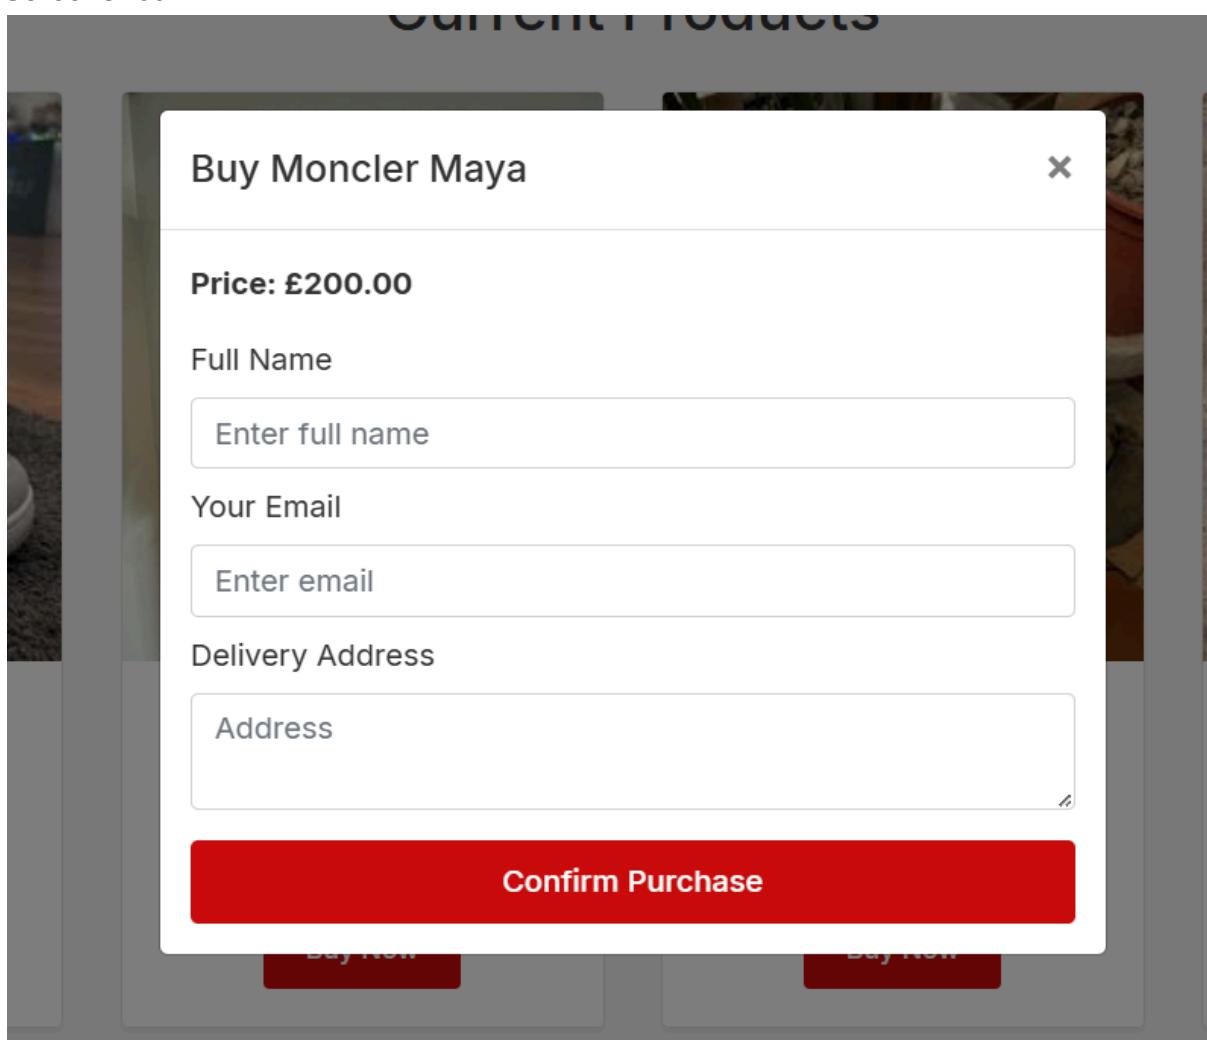

3. Purchase Modal

When the user clicks **Buy Now**, a modal appears showing:

- Product name
- Product price
- Form fields for:
 - Full name
 - Email
 - Delivery address

This modal uses Bootstrap validation.

Screenshot:

Once purchased successfully the data will be stored in the database and the product will be put on visibility 0 which means it is hidden from the web but still in the database for records.

4. Successful Purchase Notification

After completing a purchase, the user is redirected to:

index.php?success=1

A green Bootstrap success alert appears at the top of the page.

Screenshot:

5. Footer

A Basic Footer is here which can be edited easily controlled with style.css

ERD Diagram (phpMyAdmin Designer)

A ERD Diagram generated from XAMPP with the table reference is stored in diagrams/dynamicstockERD.pdf

Purchase Flow Summary

A Flowchart generated from [draw.io](#) with the exact code reference is stored in diagrams/dynamicstockFlowchart.pdf

ALL CURRENT DATA (PRODUCT IMAGES AND NAMES DO NOT BELONG TO ME THEY ARE ALL EXAMPLE DUMMY DATA)!!
